The global Data Science & Analytics Market is estimated to grow at a CAGR of 30% to reach USD 140 billion by 2024, according to a Markets and Markets report.

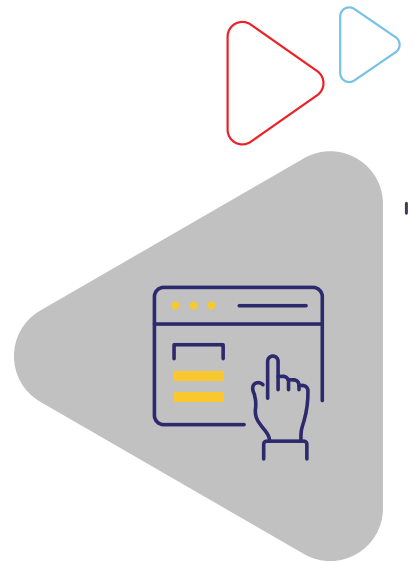

Prepare for a career in Data Science with the most comprehensive corporate programme in Data Analytics & Science without taking a break from your career. Data Science & Analytics Corporate Training Program is a four-semester programme designed to help working professionals build required skills required to advance their career as a Data Analyst/Business Analyst/Data Scientist

The programme features live Q&A lectures conducted on every weekend by Jobaaj Learning Data Science & Analytics Training Department Head., Mr. Rakshit Vig.

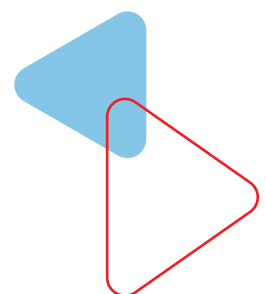

Who Should Apply?

Professionals from Finance, Marketing, Sales, Operations, Bio Medical Sciences, Research Wing, Programmer, Software Test Engineer, Support Engineer, Teacher who wish to transition to roles such as Data Analyst should consider applying to this programme.

What are the Highlights of the Programme?

- Data Science & Analytics Corporate Training is the best rated program of Jobaaj Learnings which is carefully crafted for working professionals & students.
- The programme is of four semesters, with online Q&A conducted on every weekend or after business hours. You can pursue the programme without any career break.
- Contact-less and safe Online exams facility.
- The curriculum covers areas that prepare you for the most lucrative careers in the space of Data Analytics and Advanced Analytics. It helps learners master critical skills such as Data Optimization, manipulation, cleaning, transformation, modelling & visualization.
- Tools and Technologies covered include Power BI, Power Query, SQL, Kaggle, Python, Pandas, Numpy, Matplotlib, Data Analytics Literacy, Excel etc.
- In addition to live weekly Q&A sessions, job essential packages like Interview Preparation, 1-on-1 mentor & LIVE mock interview, Resume Building, Jobaaj 's Job Portal assistance are also embedded in the program
- The assignments in the lectures enables students to apply concepts and techniques learnt during the programme.

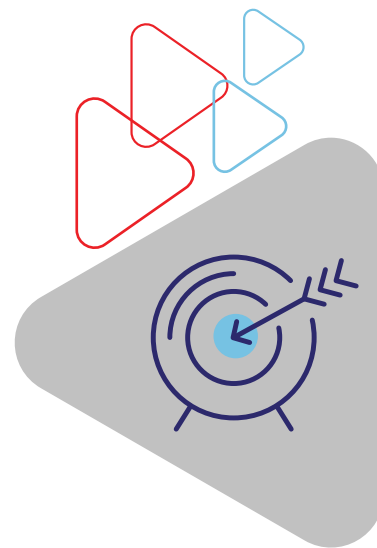

What are the programme objectives?

The major objective of the program is to make the learners job ready in the domain of Data analytics, Business Analytics, Business Intelligence & Advance Analytics.

The programme aims to help participants build a solid foundation in these areas by developing skills in:

- ★ Acquiring the knowledge of all the data literacy terms & core data analytics concepts which find application in day-to-day life of a data analyst.
- ★ Making learners comfortable in programming concepts with specialization in Python & learns the magical Data Analytics library
- ★ Data querying & manipulation using Structure Query Language
- ★ Data Mining aspects including pre-processing, cleaning, optimizing & modelling data
- ★ Building a personal portfolio by maintaining a repository of codes on Kaggle & GitHub that learners can showcase to the recruiters for getting a competitive edge

Learning methodology

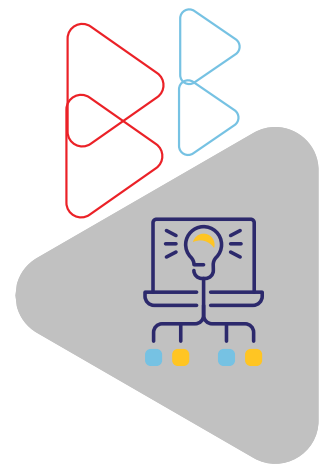

Sequential Based Learning

Semester lectures are uploaded on our customized learning portal. These lectures can be attended via the internet using a computer from any location. These online classrooms offer similar levels of interactivity as regular classrooms.

Program for Students admitted during the period May 2022 will begin in May 2022. The LIVE Q&A schedule is announced 1 day prior.

The learners will get access to the semester content once they complete the assignments & content of the previous semester.

Live Q&A are conducted on Sat/Sun as per Indian Standard Time.

Tools & Technologies covered

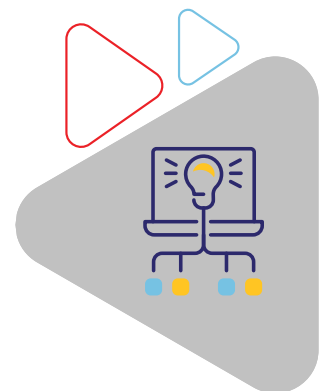

Case studies and assignments

Learners will be working on assignments and have to save all their codes on Kaggle & github to build a strong lifetime personal portfolio. Practice is the key.

24 X 7 Support

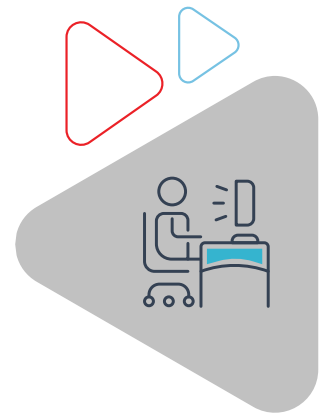

Learners will get the access to the premium discord community where they can post their queries & doubts. Our team of trainers are dedicated to solve the doubts on the community. The doubts can be carry forwarded to the LIVE sessions as well.

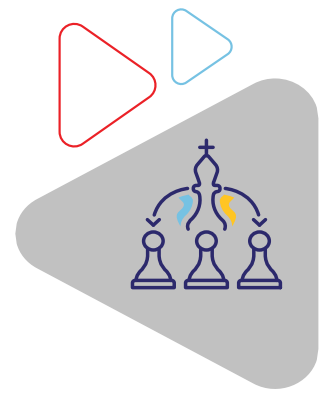

What is the Eligibility Criteria?

Minimum eligibility to apply – Learners should have scored above 50% on 10th & 12th standard. If the learner has a Bachelors/PGP/Diploma/Masters degree then they must have scored above 45% in their respective fields

Applicants should have laptops/desktop & a decent internet connection

Programme Curriculum

The programme features 40+ modules between Semester 1-4. All the courses will be offered using hybrid model of teaching.

First Semester

- ★ Data Analytics Case Study
 - ★ Data Literacy Concepts of Analytics
 - ★ Distribution, Aggregation, Central Tendency
 - ★ KPI, Imputation, DB, DW, DL, DC, DS
-

Third Semester

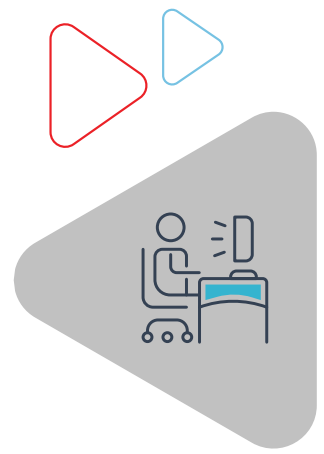

- ★ Data Querying & Retrieval
 - ★ Dimensional Modelling
 - ★ Data Manipulation
 - ★ Database Concepts
-

Second Semester

- ★ Python Core Concepts
 - ★ Numpy
 - ★ Pandas
 - ★ Matplotlib
-

Fourth Semester

- ★ Data Visualization Concepts
 - ★ Power BI & Power Query
 - ★ Dashboards & Reports
 - ★ Business Intelligence & Advance Analytics
-

COURSE WISE SYLLABUS

Data Science & Analytics Core Concepts

Learn about:

- ★ The need for data analytics with multiple case studies
- ★ Data Analytics core concepts that are used in the industry & analytics projects
- ★ Mathematical concepts essential for a strong foundation in analytics

Topics

- ★ Why Data, tasks of DA, type of DA, Bid Data, Metadata, Structured v/s Unstructured Data, Database concepts, RDBMS, Data Warehouse, Data Lake, Cloud, Data Center, Data Server, Exploratory Data Analysis, Data Wrangling, Outliers, Granularity, Aggregations, Deviation, Central Tendency, Distribution, KPI, visualization practice etc.

Python Core Concepts

Learn about:

- ★ Right from the basics, learn the core concepts of programming in a step-by-step approach
- ★ The most in demand programming language i.e., Python

Topics

- ★ Looping, Conditional Statements, Data Types, Variables, Operators, Precedence, Nesting, String Manipulation, Functions, Doc String, Arguments, Data Structures, Lists, Tuple, Sets, Dictionary, Slicing, Sorting, Format, Exception Handling, Comprehension, lambda, Map, Filter, Library, Date time modules, Time, File Operations, Math module etc

Data Analytics with Numpy, Pandas & Matplotlib

Learn about:

- ★ The data transformation, data modelling, data cleaning, storage & retrieval
- ★ Visualization of data to generate insights from it

Topics

- ★ Numpy N Dimensional Array, Indexing, Slicing, Mathematical & Statistical Operations, Broadcasting, Flattening, Series, Attributes, Index, Data frame, Data, Duplicates, Filter, Retrival, loc vs iloc, query, apply , copy, replace, joins, unions, unique, random sample, multi-index data frame etc

Structured Query Language

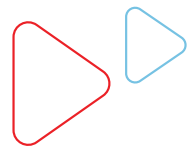

Learn about:

- ★ Data retrieval, Dimensional Modelling, Data Analysis
- ★ RDBMS and Database Concepts

Topics

Select, Count, In, Between, Like, Where, Group By, Having, Joins, Union, Sub-query, Mathematical Aggregations, Self Join, Insert, Update, Delete, Case, Cast, Coalesce, CRUD, optimised query, String manipulation, Substring, Concat, Database, Table, Views, Windows Function, Operators, DML, DCL, DTL, Routines, Procedures, Advance Queries etc

Data Science & Analytics

Business Intelligence with Power BI

Learn about:

- ★ The most in demand Business Intelligence Tool i.e., Power BI
- ★ Visualization best practice, Dashboards, Reports, AI Analytics

Topics

Data Connectors, Transform Data, Power BI, Data Health, Index, Transpose, Merge, Append, Pivot, Unpivot, Calculated Measures/Columns, Filters, Data Model, Drill through, Bookmark pane, Selection pane, Q&A feature, Stacked Bar Chart, Area Chart, Ribbon Chart, Tree Map, Donut, Pie, Multi Row KPI, Slicers, Key Influencers, Decomposition Tree, Gauge Chart, Filled Maps, Custom Visuals, Row Level Security, Incremental Refresh, Power BI Server, Customized Tooltips, DAX, Calculate, ALL, AllExcept, Level of Detail etc.
